

Open Loop "Skyline" System 3

A Revolutionary, Low Cost, Easy to Install Solar Water Heater that can connect to your existing water heater

Two 10-01 Collectors can produce up to 20,000 Btus!

It would take a 1 kW Solar Electric system to produce that amount of Power - enough to substantially reduce energy costs for the average family.

Add more collectors for more savings (up to .8 S/F per gallon).
(20,000 Btus = 1,000 Watts of PV power in terms of Thermal heat)

Above: 4: 10-01s = 2 kW system

The Skyline System 3, Small Package, Big Features, Low Price:

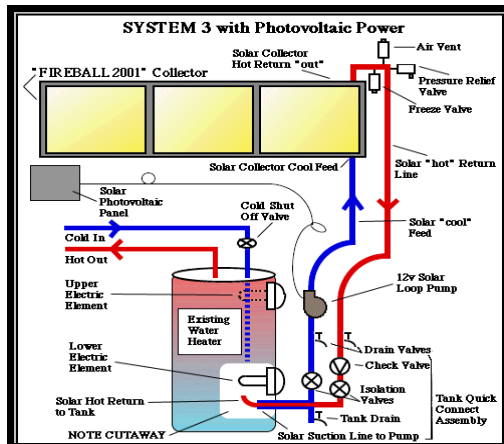

- High Performance Thermafin all copper absorber with "Black Crystal" selective coating.
- Unbreakable "Macrolux" 2-wall glazing with 10 year full Warranty against discoloration.
- A 10-01 collector is 10 S/F, only 19 Pounds, 6' long and 20" wide for easy handling.
- 20 year Limited Collector Warranty and 10 Year Limited System Warranty.
- 100% Run by the Sun with a solar electric PV Powered 12 Volt Pump.
- Exclusive Low cost shipping by UPS, DHL or FedEx Ground.
- 100% Complete, NO Solder Solar Loop including a waterside tempering valve.
- SRCC OG100 and FSEC ratings qualify for 30% Federal tax credit and rebates.
- Attractive design with 2 standard color options: Dark Brown and Medium Gray.
- This "Open Loop" system circulates potable water through the collector to heat water in the existing or added water heater. System 3 is ideal for Tropical climates like Hawaii, or when used with light freeze options, for Temperate climates like Southern California, and Central and South Florida, which have occasional Light Freeze.

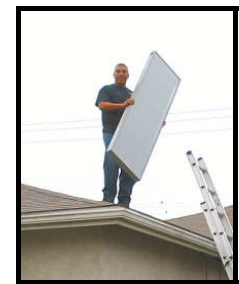

The Hawaii and Florida State Energy Offices Estimate that the Average All Electric Home

Uses 30% of it's Total Electric Energy Just to HEAT WATER!

Installing a Solar water heater can be like increasing your cars gas milage by 50 to 90%!
